

N° 28,624

A.D. 1913

Date of Application, 11th Dec., 1913

Complete Specification Left, 11th June, 1914—Accepted, 22nd July, 1915

PROVISIONAL SPECIFICATION.

Improvements in Pocket Books for Memoranda and the like.

I, CHARLES GLADITZ, of Broad Sanctuary Chambers, Westminster, London, S.W., Manufacturer, do hereby declare the nature of this invention to be as follows:—

My invention consists in improvements in pocket books for memoranda and the like, and consists in the novel construction of same whereby notes for memoranda can be individualised, and arranged in groups according to special headings.

In carrying this invention into effect, I arrange a folder or cover adapted to contain internally or externally a tablet or book of detachable or tearable sheets. Inside said cover I arrange at convenient distances, pockets, adapted to contain the sheets of the tablet or book when torn off. These pockets are arranged at equi-spaced intervals on one of the vertical sides of the cover, or may be arranged in some other manner equally convenient whereby the contents of each pocket are readily accessible and differentiated from its immediate neighbours.

Each of these pockets may be individualised by color, by number, or other suitable means of selection, or a small label detachable or otherwise may be attached on the outside of the pockets in a conspicuous position so that it may be numbered or marked to suit the user's requirements.

The operation of this invention is as follows:—

Notes are made upon the tablet or tearable sheets and are then immediately inserted into the pocket or receptacle adapted to contain such information under its specified head, which heading is indicated on the label, or by color; or by some other distinctive means peculiar to each pocket or receptacle. Thus assume a man to be in charge of several departments, he can in his leisure make notes suitable for the heads of such departments, and can have all the information that he wants for any such department immediately available, without reference to several pages of notes as would be necessary in the ordinary case. The memorandum book may be provided with a back loop pencil, with crayons, or similar writing material, which writing material may also in itself have distinctive colors to still further department the notes made.

In a modified form the tearable tablet may be provided with printed sheets, such printed sheets being designed for any given requirements, so that orders, notes or instructions can be made, and filed in their respective pockets, and such pockets may be duplicated for the reception of a copy made at the time of writing the note or order, or the copy can be retained in the tablet by means of any known method of interleaving.

Dated this 11th day of December, 1913.

[Price 6d.]

COMPLETE SPECIFICATION.**Improvements in Pocket Books for Memoranda and the like.**

I, CHARLES GLADITZ, of Broad Sanctuary Chambers, Westminster, London, S.W., Manufacturer, do hereby declare the nature of this invention, and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:—

My invention relates to improvements in pocket books for memoranda and the like, and consists in the novel construction of such books and in the provision of means therein whereby notes for memoranda can be individualised and arranged according to special headings.

One method of carrying the invention into effect is shown in the accompanying drawings in which:—

Fig. 1 shows the folder in its open position,

Fig. 2 shows the same closed,

Fig. 3 is a plan of a pocket book embodying this invention.

A folder or cover 1 is arranged to form part of a pocket book or wallet 2, of any desired and convenient shape or construction. This folder is adapted to contain either externally, as shown in Fig. 2, or if desired internally, a tablet or book 3, of detachable leaves or tearable sheets. Within said cover pockets 4 are arranged at convenient distances, and adapted to contain the sheets of the tablet or book when torn off. These pockets are arranged at equi-spaced intervals on one or both of the vertical sides of the cover, or they may be arranged in some other manner equally convenient, whereby the contents of each pocket are readily accessible and differentiated from those of its immediate neighbours, as for instance in echelon.

Each of these pockets may be individualised by color, by number, or by some other suitable means. In the method shown in the drawings, a label or labels 5 which may be detachable or otherwise, and which may be of celluloid or other suitable material, are attached on the outside of the pockets 4, and are adapted to be numbered or marked to suit the user's requirements. As the papers, when arranged in the said pockets 4 overlap, and only the top portion of the contents of each pocket are differentiated from those of its neighbours, the divisions on the marking label 5 are, in the modification shown in the drawings, made on the upper portion of the said label, corresponding with the overlapping portions of the papers arranged in the pockets. If the pockets 4 are arranged in some other manner, the divisions of the distinguishing label or the like can of course be made to correspond to such altered arrangement.

The operation of this invention is as follows:—

Notes are made on the tablet or tearable sheets 3, and are then immediately inserted in the pocket or receptacle 4 adapted to contain such information under its specified head, which heading is indicated on the label 5, or else by color or by some other distinctive means peculiar to each pocket or receptacle. Thus assume a man to be in charge of several departments, he can in his leisure make notes suitable for the heads of such departments, and can have all the information that he wants for any such department immediately available, without reference to several pages of notes as would be necessary in the ordinary case. The memorandum book may be provided with a back loop pencil 6, or with crayons, or similar writing material, which writing material may also in itself have distinctive colors, still further to department the notes made.

In a modified form the tearable tablet 3 may be provided with printed sheets, such printed sheets being designed for any given requirements, so that orders, notes or instructions can be made, and filed in their respective pockets, and

Gladitz's Improvements in Pocket Books for Memoranda and the like.

such pockets may be duplicated for the reception of a copy made at the time of writing the note or order, or the copy can be retained in the tablet by means of any known method of interleaving.

One method only of carrying the invention into effect has been described, but it is obvious that this can be varied to suit various requirements; thus for instance, the device may either be made integral with any desired form of pocket book or wallet, or the folder only, containing the tear off tablet and the selection pockets may be made in such a manner that it is adapted to be inserted in a previously made pocket book or wallet, in which case it may be secured to the latter by means of an elastic band, or in any other convenient manner. The pocket book or wallet may also of course be fitted with any desired arrangements, and/or devices which are usually incorporated in such article, and such additional devices or arrangements may also form part of the folder itself, so long as they do not interfere with the satisfactory working thereof for the purposes above set forth.

Having now particularly described and ascertained the nature of my said invention, and in what manner the same is to be performed, I declare that what I claim is:—

1. In pocket books, or wallets, the combination of a tear off writing tablet with pockets adapted to contain the leaves of said tablet, and means for individualising said pockets.

2. In pocket books, or wallets, the particular arrangement shown and described of a tear off writing tablet, pockets to retain the leaves of said tablet, and a label for individualising said pockets.

3. The improved pocket book or wallet, constructed and arranged substantially as described and illustrated, and for the purposes herein set forth.

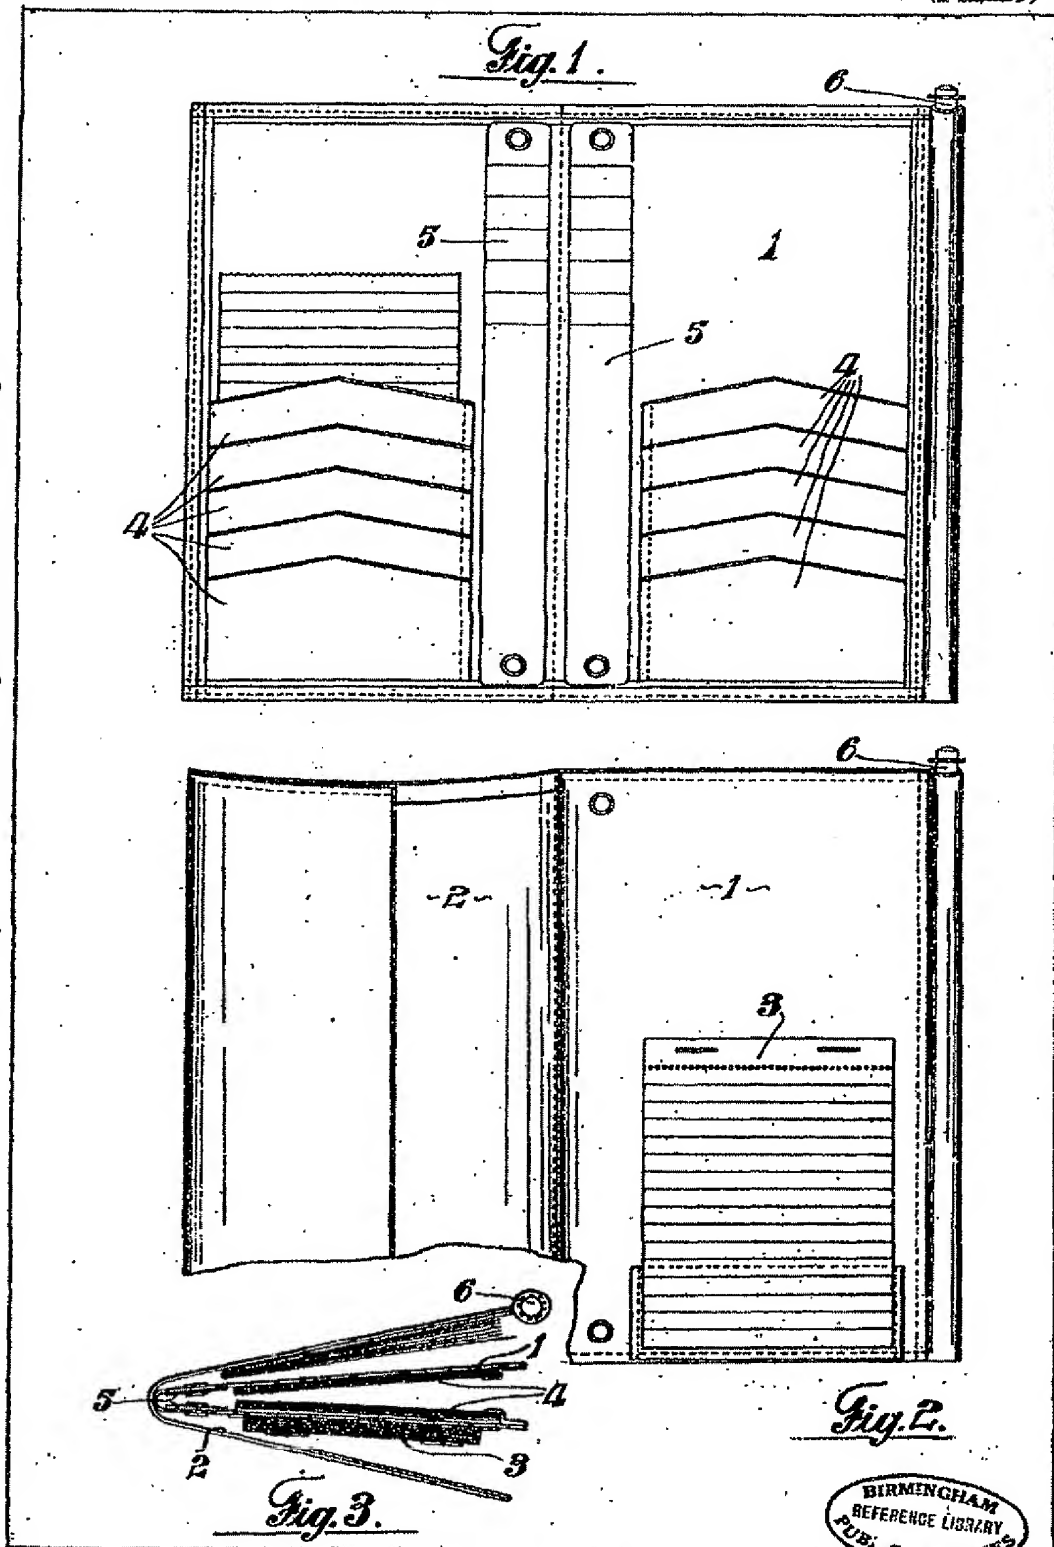

Dated this 11th day of June, 1914.

FRANCIS HERON ROGERS,

Agent for the Applicant,
